

Shamrock Trading Corporation

Complete Elevator Control using Avigilon Control Manager

The Customer

Shamrock Trading Corporation

Industry

Commercial Office

Location

Overland Park, KS

Duration

6 Months

Services

- Access Control

The Challenge

Shamrock Trading Corporation built a new, high rise, 10-story commercial building across from their existing campus due to their continued growth and success in the marketplace. They needed to extend their existing Avigilon Control Manager system (ACM) to accommodate the expansion for this new facility and parking garage which included integrating their elevators into ACM and controlling these elevators through kiosks.

The Solution

ADS collaboratively worked with key stakeholders and the customer's elevator service provider using a 3rd party software to integrate between the elevator software and the ACM system which resulted in complete elevator control using their card readers.

The Result

ADS successfully completed the integration of their elevator system, giving Shamrock Trading Corp the ability to restrict floor access throughout the entire building.

"ADS installed almost 100 card readers with more to come for our new building project. We have used other companies in the past but moving to ADS was one of the best moves we made for this project. Their professionalism will go unmatched."

- Seth Wand, Director of IT, Shamrock Trading Corporation
